SUITABLE FOR MEAT AND LAYER BIRDS

A HIGHLY PALATABLE BALANCED MEAL TO KEEP YOUR BIRDS AS HEALTHY AND PRODUCTIVE AS POSSIBLE.

INGREDIENTS/BENEFITS

Whole & rolled cereal grains

Grains are usually ground to improve digestibility, but some remain whole. Cereal grains are used mainly to satisfy the energy requirement of poultry.

Legumes

Such as lupins, are also a form of protein, but contain 3000 ME, up to 500 more ME than other grains.

Protein Meals

Required for the synthesis of body tissue (particularly muscle), physiological molecules (such as enzymes and hormones), feathers and for egg production. Proteins also provide a small amount of energy.

Calcium

Layer hens require calcium in large quantities for growth and egg production.

Essential Vitamins & Minerals

Minerals are vital for normal growth and development in poultry, such as bone formation and body processes such as enzyme activation. Similarly, vitamins are essential for the body systems of poultry. Both fat soluble (A, D, E, K) and water soluble (biotin, choline, folic acid, niacin, riboflavin, thiamine, pyridoxine, pantothenic acid and B12) are needed in the diet to maintain proper health and wellbeing of poultry.

Probiotics

Probiotics are beneficial living bacteria that when supplied in adequate levels in the gut can aid and prevent some illnesses and promote a healthy digestive tract and immune system, which encourage a more consistent egg supply.

Natural Plant extracts

Feed additives to improve and increase production.

Dust suppressants

Help minimize the dust produced from the grain mix and protects chickens from inhaling.

NUTRITIONAL ANALYSIS

Minimum Crude Protein	20%
Maximum ADF	31%
Minimum ME	12.5 Mj/kg
Maximum Starch	50%

FEEDING DIRECTIONS

- Offer ad lib with access to clean water at all times.
- Layers top up with 4% shell grit or course limestone.
